

# AgriPura

**AgriPura Lauric** is a dry product, which mainly consists of lauric acid (C12).

Lauric acid is a natural product, from coconut oil and palm kernel oil and belongs to the medium-chain fatty acids (MCFA's) It is known that this group of fatty acids is able to pass through the cell wall of gram positive bacteria, the latter does not succeed in the short-chain organic acids. Lauric acid is naturally present in, for example, breast milk and also in sow milk.

**AgriPura Lauric** is available in 25 kg bags

In addition, we have added a part GML 90 in the **AgriPura Lauric**. This has resulted in a product that has a very good anti-bacterial effect against gram-positive bacteria such as Clostridea, Streptococci and Staphylococci. To ensure that the product has good free flow running properties, a small fraction of silica has been added.

**AgriPura Lauric** is used via the compound feed, it can help to drastically reduce the use of antibiotics.

It is a heat resistant product and it is completely biodegradable.

**Dosage:** 1 to 3 kg per mton of feed.
