

AgriPura

The **AgriPura Acid** product consists of a well-functioning combination of 5 organic acids, the product is buffered and therefore safe for humans and animals.

AgriPura Acid is aimed at reducing the pH in the stomach with the aim of stimulating protein digestion. Good protein digestion is important, this allows the animal to grow quickly and healthily. If the pH is lowered to below 4, the gram of

negative bacteria such as Salmonella and E-Coli are less likely to develop. The lower pH will cause the pancreas to respond, due to the secretion of more pancreatic juices and indirectly leading to more digestive enzymes. In total this ensures a better balance in the animal.

AgriPura Acid is completely biodegradable.

The product is available in dry and in liquid form:

AgriPura Acid Liquid, Dosage 2-3 kg per mton (compound) feed

AgriPura Acid Dry, Dosage 1-3 kg per mton (compound) feed.

AgriPura Feed Additives
