

Product Information AgriPura Purafoam Acid

Purafoam Acid is a highly concentrated acid based, long cling foam for deep cleaning and scale removal in agricultural buildings.

The high concentration and low PH break down the matrix of mineral scaling which forms the basis of a biofilm in a barn.

How to use:

Apply 5-10% of Purafoam Acid with a proper foam lance connected to a high pressure cleaner to obtain the best results. Cover the surface to be cleaned with an even layer of 2 cm of foam, starting at the bottom and working up towards the ceiling. Work in blocks of approx. 5 m wide.

Please pay special attention to the waterlines and feed pans that are often left with mineral scaling after cleaning with an alkaline foam.

A contact time of 20 minutes is advised, however do not let the product dry in and do not use in the sun.

Rinse all equipment and surfaces with water after use of Purafoam Acid.

Maximum temperature : 60°C

Do **NOT** use on soft metals like aluminium or on cars, machinery etc. . For this purpose use AP Unifoam

Packaging

25 kg red jerrycan; 200 kg; Blue Drum

Security: Use this product safely and always refer to the Safety Data Sheet

Store above freezing point In a dry storage away from direct sunlight
