

# AgriPura

**AgriPura Sal Protect Liquid** is a liquid product with which the Samonella pressure can be effectively reduced.

Thanks to a sophisticated combination of six partially buffered organic acids, this product has an excellent effect against gram-negative bacteria, the pH value is reduced and the bacteria become

less active. The organic acids can also kill bacteria from the inside.

If **AgriPura Sal Protect liquid** is added to the raw materials, the development of Entero bacteria is particularly prevented. This ensures that the risk of contaminated feed is reduced. If the quality of the raw materials is guaranteed, this leads to a higher feed quality.

**Dosage:** 2 to 3 kg per 1,000 liters of drinking water

**AgriPura Sal Protect Liquid** is available in 1.000 kg IBC
