

AgriPura

AgriPura TMR Protect is a combination of organic acids that inhibit the heating of the feed alley and also in the feed mixer.

In the feed mixer wagon and later at the feed alley, the conditions, especially at higher outside temperatures, are ideal for the development of yeasts and fungi. As a result, the possible secretion of mycotoxins and a temperature increase of the TMR. Often resulting in an

unattractive taste and odor, which reduces feed intake and leaves more residual feed. **AgriPura TMR Protect** can effectively prevent the development of yeasts and fungi, with the result that the temperature increase in the TMR remains limited and the feed intake remains maximal.

Dosage: 1 to 2 kg per tonne as a breeding inhibitor

0.5 to 1 kg per m² over the top layer of the pit as a silage agent

AgriPura TMR Protect is available in 3 ways of packaging : 25 kg cans , 225 kg drums and 1.000 kg IBC.
