

# AgriPura

**AgriPura Wetfeed** can be used to protect “wet” feeds mainly to keep yeasts and molds under control. AgriPura Wetfeed is an aggressive and corrosive product, it lowers the pH, which improves the quality of the liquid feed.

Due to the high concentration of organic acids, yeasts and molds as well as gram-negative bacteria are killed.

When feeding moist-rich feeds it is always a challenge to keep the yeasts under control, **AgriPura Wetfeed** can play a crucial role in this without affecting the taste of the feed.

Dosage;; 2 to 4 kg per ton

Pay special attention that the feed residues in the silo - before it is refilled - are sufficiently acidified with **AgriPura Wetfeed**.

**AgriPura Wetfeed** is available in drums of 225 kg and in 1.000 kg IBC.

**AgriPura Feed Additives**
